DETAILED ACTION

Response to Amendment

Claims 2-4, 13-26 & 28 are pending in the application and claims 13-26 are withdrawn. Claims 2-4 & 28 are pending examination and rejected for the reasons below.

Claim Interpretation

Regarding claims 2 & 28, the recitation of a double layer capacitor is part of the preamble and is seen as intended use. If the body of a claim fully and intrinsically sets forth all of the limitations of the claimed invention, and the preamble merely states, for example, the purpose or intended use of the invention, rather than any distinct definition of any of the claimed invention's limitations, then the preamble is not considered a limitation and is of no significance to claim construction (MPEP 2111). Since the body of the claim does not give life, meaning, and 'vitality' to the claim, the preamble, while considered is not given patentable weight (MPEP 2111).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 2-4 & 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,800,222 (Noguchi) in view of US Patent 6,235,427 (Idota).

Art Unit: 1745

Noguchi discloses a method of making a double-layer capacitor having activated carbon and electrically conductive powder. The electrically conductive powder can be any of graphite, acetylene black or Ketchen black. The activated carbon has a particle size of 5 – 30 microns and the conductive powder is between 1-100 microns. (Abstract, 2:5-40, 7:45-55). The amount of conductive powder to activated carbon is 11% by weight (8:1-8).

While Noguchi discloses the particles are blended together, the method used to blend the particles together is not disclosed.

Idota teaches using a planetary mixer to create a homogenous mixture (13:34-47).

Therefore it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the method of making a carbonaceous material mixture of Noguchi with the planetary mixer of Idota to create a homogeneous mixture.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1745

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
